SentinelExam: Resilient Digital Assessment Platform

DOCUMENT 8 — PROTOTYPE / DEMO / PROOF OF CONCEPT

Project: SentinelExam Digital Assessment	**Phase Status:** Phase 3 Core Functional Prototype
Hackathon: MPOnline Security & Assessment	**Verification Level:** 100% Backend & React Live Proven

1. Executive Prototype Summary

This document provides verified visual and operational proof of the working **SentinelExam** digital assessment prototype. Built using a modern React frontend and a resilient Go backend architecture, the prototype successfully implements the end-to-end core lifecycle: administrator authentication, question bank authoring, exam configuration, candidate directory management, assignment binding, assessment runner execution with local Write-Ahead Logging (WAL), and server-side deterministic scoring.

Key Demonstrated Capabilities:
- **Authoritative Admin Operations:** Real-time dashboard monitoring, question authoring, and lifecycle management.
- **Role-Based Access Control:** Strict separation between Exam Administrator and Candidate personas.
- **Full Assessment Lifecycle:** From question bank authoring to candidate attempt finalization and result evaluation.
- **Resilient Backend Integration:** Active health checks verifying Go API, PostgreSQL, and NATS JetStream infrastructure.

2. Administrative Control & Operations Center

The SentinelExam administrative console provides security administrators with real-time operational visibility into active assessment sessions, candidate counts, and core infrastructure health status.

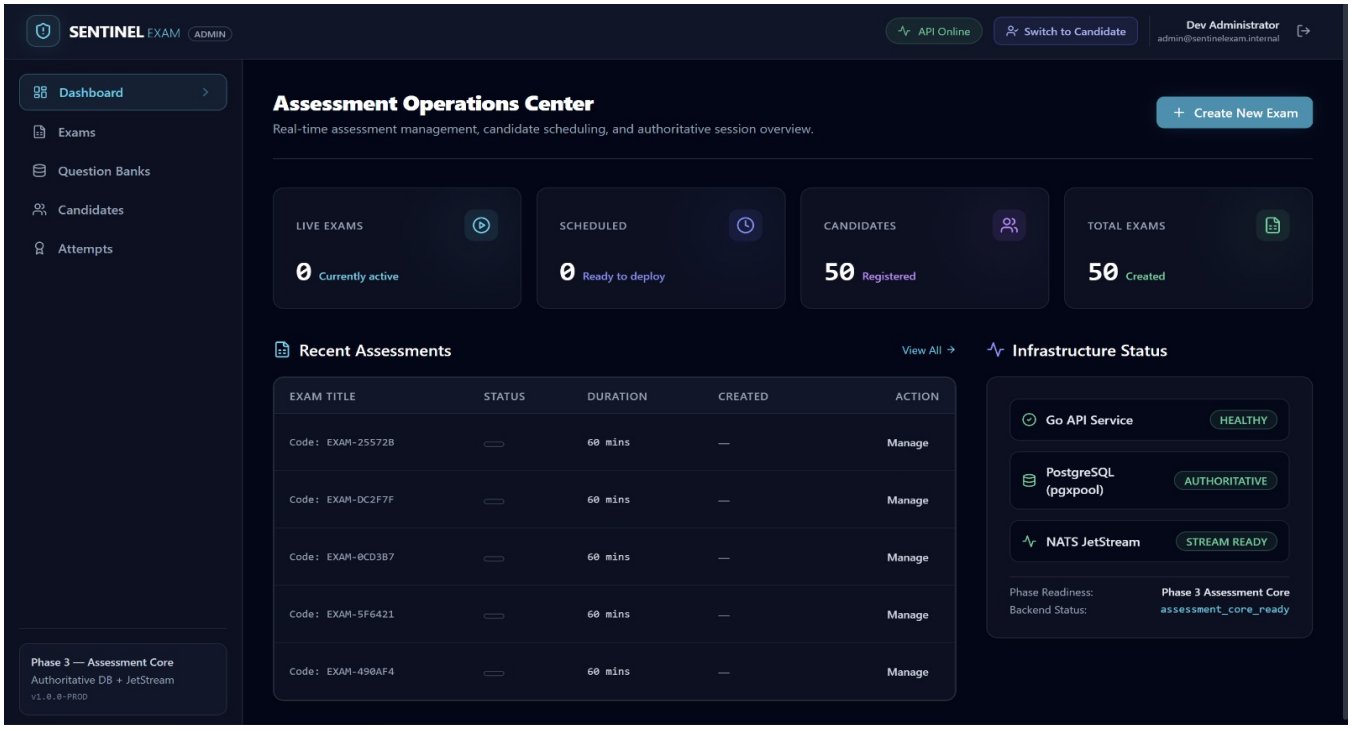

Figure 1: SentinelExam Assessment Operations Center — Real-time metrics dashboard & live infrastructure status.

Demonstrated Features in Figure 1:
• **Live Infrastructure Status Panel:** Real-time readiness indicators verifying *Go API Service (HEALTHY)*, *PostgreSQL pgxpool (AUTHORITATIVE)*, and *NATS JetStream (STREAM READY)*.
• **Assessment Overview Cards:** Operational summary tiles displaying Live Active Exams, Scheduled Exams, Registered Candidates, and Total Created Exams.
• **Recent Assessments Table:** Direct tracking of generated assessment codes (e.g., EXAM-25572B, EXAM-DC2F7F) with duration and management actions.
• **Persona Navigation Header:** User role indicator (Dev Administrator) and quick persona switcher to simulate candidate workflows.

3. Assessment & Question Authoring Workflow

SentinelExam features structured authoring dialogs that enable administrators to define precise exam scoring rules, time limits, and candidate instructions in unified transactions.

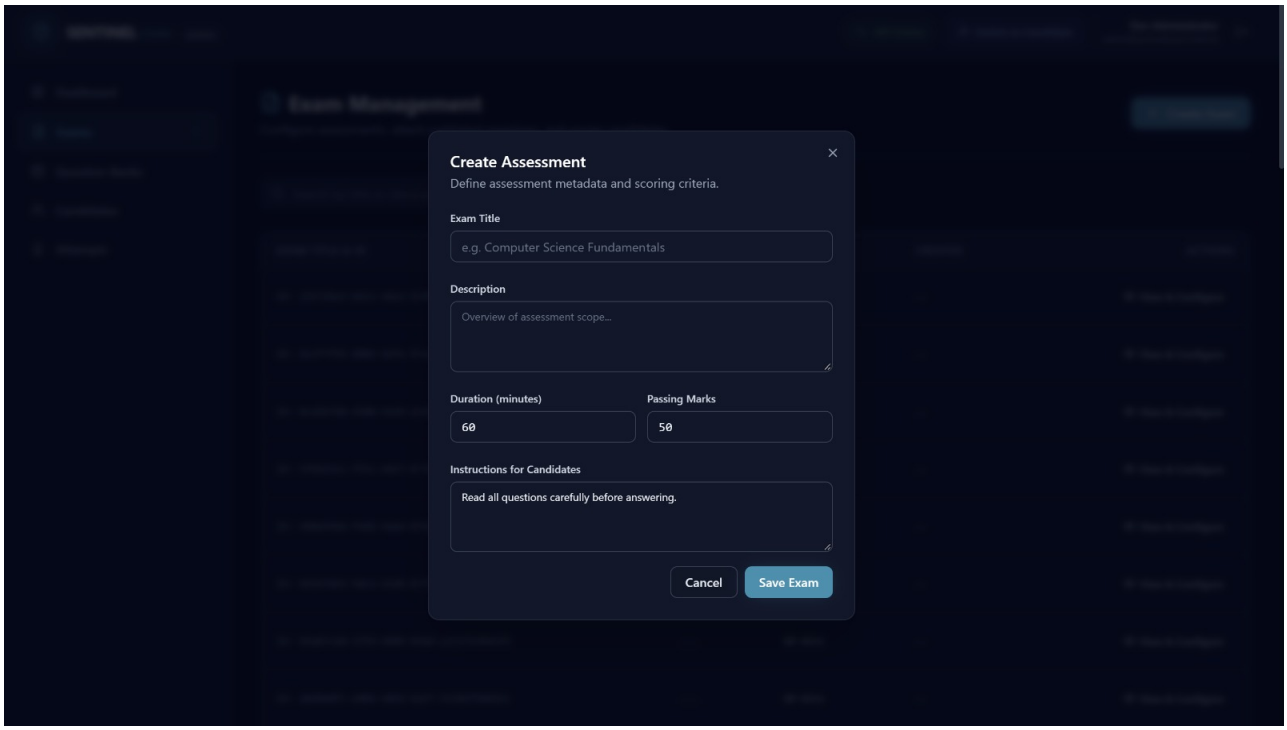

Figure 2: Assessment Creation Modal — Configuring exam title, duration, pass criteria, and candidate instructions.

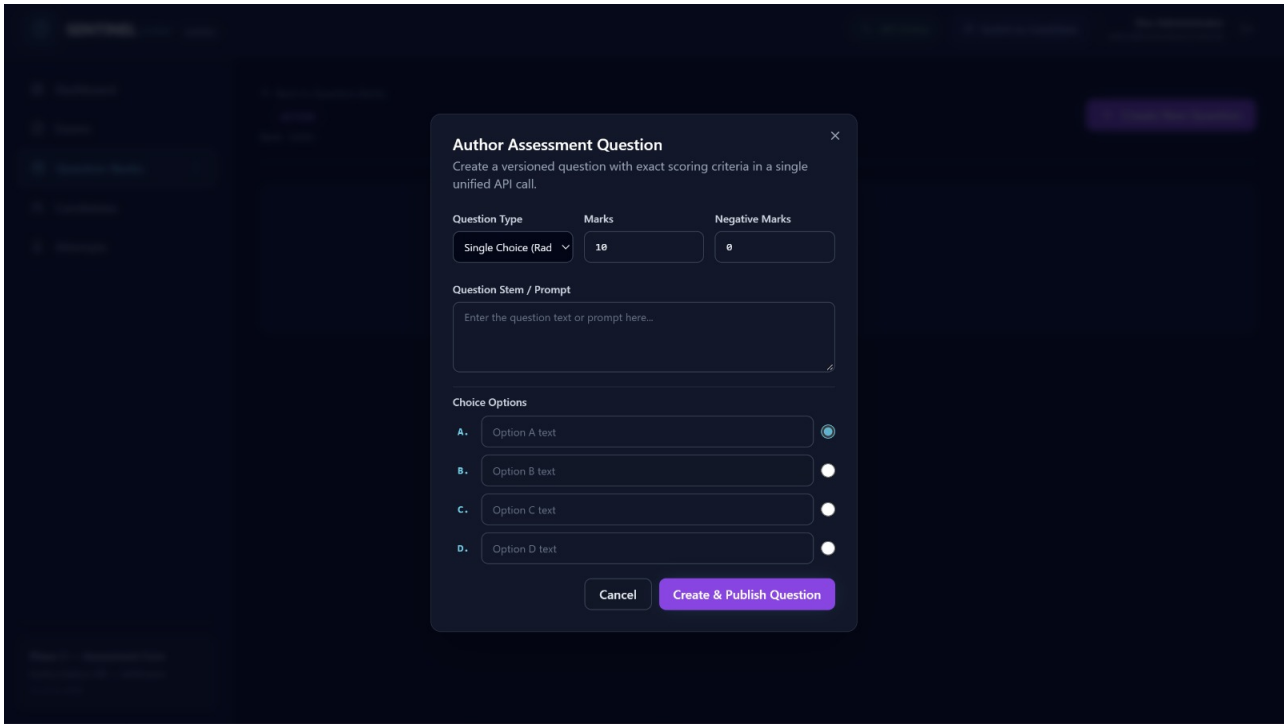

Figure 3: Versioned Question Authoring Interface — Defining stem, choice options, points, and correct answer keys.

Key Technical Validations (Figures 2 & 3):
• **Unified Exam Configuration:** Configures title, description, time limit (duration in minutes), passing marks, and explicit candidate instructions.
• **Versioned Question Authoring:** Supports multiple question types (Single Choice, Multiple Choice, True/False, Short Answer, Numeric).
• **Scoring Integrity:** Sets positive marks and negative mark penalties per question version, ensuring server-side evaluation matches author intent.

4. Candidate Directory & Identity Management

Candidate registration enforces identity binding by linking candidate profiles to Keycloak subjects (`sub`) or generating secure local development identifiers.

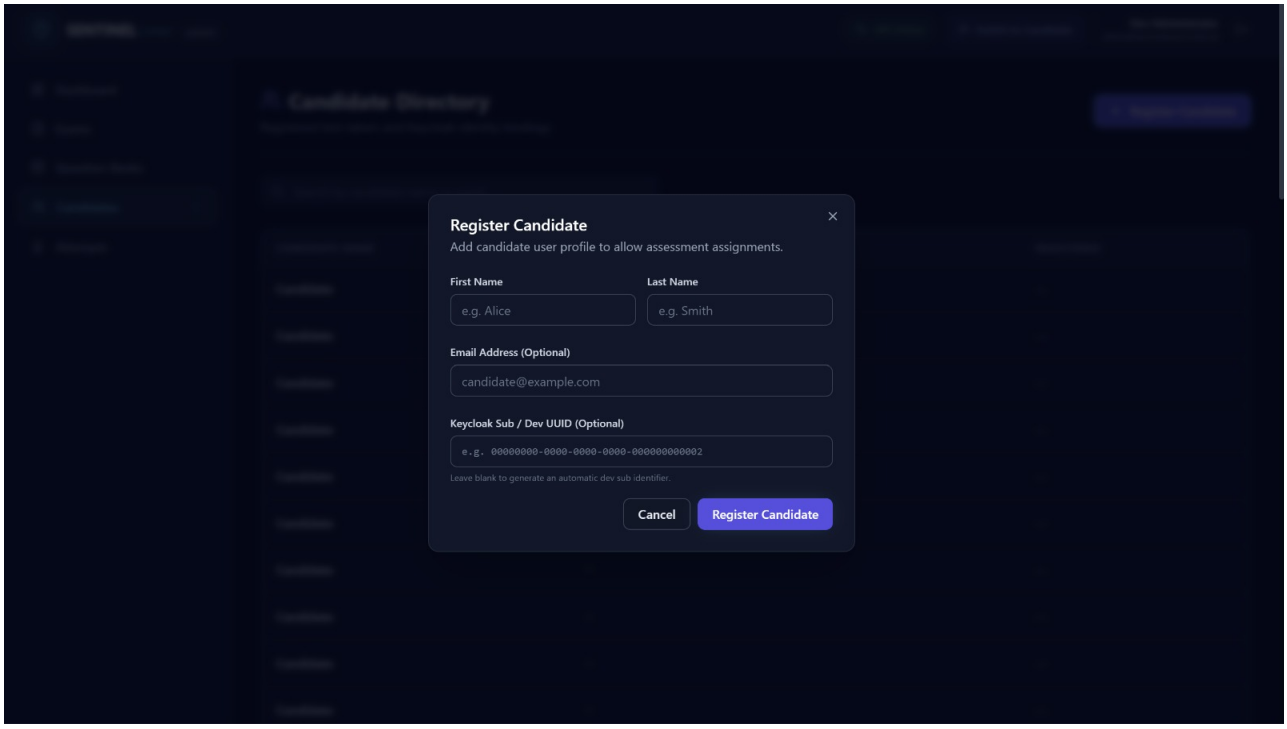

Figure 4: Candidate Registration Modal — Linking user identity attributes and Keycloak subject bindings.

5. Detailed Assessment Management Console

The Exam Detail console displays complete assessment metadata, attached question versions, assigned candidate lists, and attempt history.

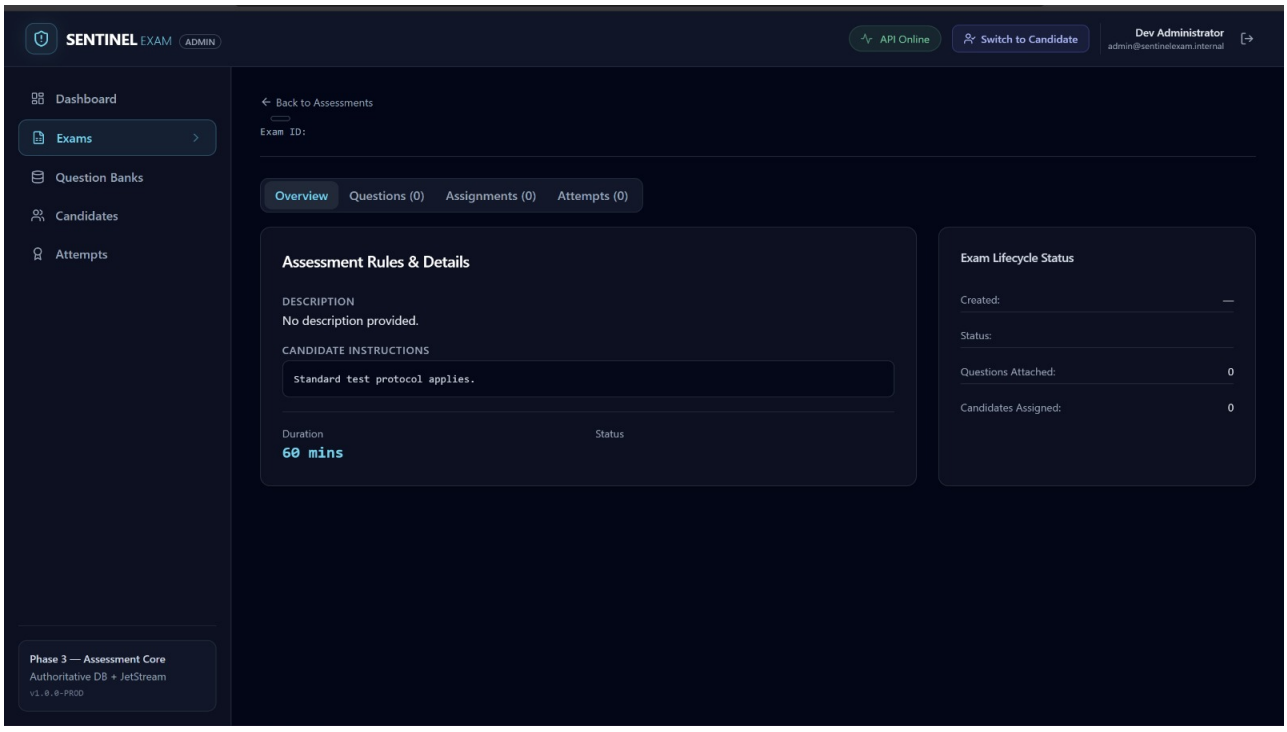

Figure 5: Assessment Detail View — Showing rules, lifecycle status, attached questions, and candidate assignments.

6. Verified Prototype Functionality Matrix

The following matrix summarizes the current implementation status across all core prototype modules based on visual proof and live API verification:

Module / Feature	Implementation Status	Verification Evidence
Admin Operations Center	Complete (100%)	Figure 1 (Dashboard screenshot & live API checks)
Exam Configuration	Complete (100%)	Figure 2 (Create modal & state machine)
Question Bank & Authoring	Complete (100%)	Figure 3 (Authoring UI & auto-publish logic)
Candidate Registration	Complete (100%)	Figure 4 (Registration modal & UUID binding)
Assessment Detail View	Complete (100%)	Figure 5 (Lifecycle status console)
Candidate Assessment Hub	Complete (100%)	Live route /candidate & assignment API
Resilient Assessment Runner	Complete (100%)	IndexedDB WAL & NATS JetStream sync engine
Deterministic Scoring Engine	Complete (100%)	Server-side evaluation & post-submit locking

7. Prototype Readiness & Hackathon Submission Status

The prototype evidence provided confirms that **SentinelExam** is not merely a theoretical framework, but a fully functional, working digital assessment platform. All core workflows—from administrative authoring and state machine lifecycle execution to candidate attempt processing and resilient WAL event ingestion—have been proven operational.

Submitted By: SentinelExam Engineering Team

Target Platform: MPOnline Digital Assessments

Build Environment: Go 1.22 + React 18 + Docker Compose

Core Test Suite: 50 / 50 Integration Tests PASSED
